Important repair instructions

- Only skilled personnel should carry out the repair.
- After repair the appliance should function properly.
- After repair the appliance has to meet the regulatory- and safety requirements that were applicable at the time of release of the model.
- After repair the appliance always has to be tested for electrical safety according VDE 0701-0702 and for medical products IEC 62353.

Philips EP Series

General information

Technical information

- Voltage : 220 - 240 V
- Frequency : 50 - 60 Hz
- Power consumption : 1450 W
- Standby power consumption: 0.22 W
- Auto shut-off time : 15 min
- Capacity water tank : 1.8 litres removable
- Capacity coffee bean : 275 g
- Capacity LatteGo : 250 ml
- Capacity Coffee grounds : 12 pucks
- Cord length : 1.2 m
- Pump pressure : 15 bar
- Adjustable spout height : 85 - 145 mm
- Weight and dimensions:
 - Weight of product : 7 - 7.5 kg
 - Dimensions of product : 246 x 372 x 433 mm (WxDxH)

Maintenance products

- Descaler 996530067222
- Jar of Grease 132253695601
- Silicone grease 996530045784

Production date (or serial number)

Optional (accessories)

- AquaClean water filter CA6903
- Descaling solution CA6700
- Brew group grease HD5061
- Coffee oil remover tablets CA6704

Coffee and machine specifications

Drinks	Min. qty (ml)	Default qty (ml)	Max. qty (ml)
Espresso	30	40	90
Ristretto	20	30	60
Coffee	100	120	220
Caffe Crema	115	140	220
Espresso Lungo	60	80	180
Americano	40	40	40
Cappuccino (Coffee + milk)	20 (100)	40 (120)	80 (210)
Caffe latte (Coffee + milk)	30 (80)	60 (140)	90 (340)
Cafe au lait (Coffee + milk)	50 (50)	90 (90)	150 (150)
Late macchiato (Coffee + milk)	20 (80)	40 (200)	80 (340)
Flat White	30 (40)	40 (80)	70 (180)
Frothed milk	40	180	320
Travel Mug	0	240	360
Hot Water	100	150	300

Coffee grounds drawer	Description and values
Time-out for coffee grounds drawer	5 seconds
Reset dreg counter	Dreg emptying alarm, if the coffee grounds drawer is removed for more than 5 seconds.
STANDBY	Description and values
Time (default)	15 minutes
Time programmed by Consumer/Service	NO
Boiler temperature during Standby	Boiler OFF
WATER TANK	Description and values
Water reserve (pulses) with water filter	125 ml (260 pulses)
Water reserve (pulses) with no water filter	125 ml (260 pulses)
Water reserve modifiable by Production/Service departments	NO
"Fill tank" alarm	YES
Connect to water mains	NO

Technical information

Specific tools and equipment

Description	Notes
Flathead screwdriver	# 0, # 2
Torx screwdriver	(T10)
Pliers for Oetiker clamps	
Digital Thermometer	Type K (accuracy for temperature of 0,05 % or $\pm 0,3^{\circ}\text{C}$)
Temperature probe	80PK-22 (80AK-A Thermocouple adapter required)
Scale	KERN EMB 500-1 or comparable device with a base accuracy of 0,05 % or $\pm 0,5\text{ g}$
Power meter	Voltcraft EnergyCheck 3000 or comparable device with a base accuracy of 1 % or $\pm 5\text{ W}$
Stopwatch	Basic model
Serkit	Tool needed for programming with our service tool
EP series cable	Cable for Philips EP1200-2200-3200 series
EPSC (Espresso Philips Service Center)	Tool used to flash the SW on the machines (for SW upgrade and diagnostics mode). Refer to SDA_114585

Technical information

Specification for the measurement of the coffee products temperature

Before measuring the in-cup temperature make sure the following conditions will be met:

Conditions:

- Water temperature in tank: 23°C (+/-2°C).
- Use a plastic cup (see picture 1).
- Use a digital thermometer (see picture 2) (e.g. type K probe diameter max 2mm (see picture 3)).
- The coffee machine is tested without any change of parameters or calibrations, which may affect the temperature of products, so the measurement of temperature must be done with machine in default factory setting.

Procedure:

- Place the plastic cup under the dispensing spout. (picture 1)
- Dispense coffee
- Measure the temperature immediately after coffee has being dispensed, you need to finish the measurement within 12 seconds. The temperature in the cup is measured by placing the probe of the thermometer in the cup near the bottom. Then stir the probe in the cup for 5 to 6 times and read out the thermometer values during stirring. Hold the probe still in the center of the cup.
- Record the highest value.

Depending on the coffee volume selected to measure, you would need to position the probe on several height levels to measure the correct temperature in the plastic cup.

10mm for 35gr - 17mm for 60gr - 35mm for 120gr (see Picture 3).

Espresso Coffee Italy Q.ty 40 gr.

Temperature of 1st product 69°C ≤ 85°C

Temperature of 2nd product 72°C ≤ 85°C

Coffee Q.ty 120 gr.

Temperature of 1st product 72°C ≤ 85°C

Picture 1

Picture 2

Picture 3

Technical information

Specification for the measurement of the Milk products temperature.

Before measuring the milk froth temperature and milk froth height make sure the following conditions will be met:

Conditions:

- a) Use semi skimmed UHT milk with a fat percentage between 1.5 – 1.8%
- b) Milk is cooled between 4 – 8°C (refrigerator temperature).
- c) Use a plastic transparent measuring beaker which can hold min 250mL with an inner diameter of 70mm.
- d) Use a digital thermometer (see picture 2, page 8) (e.g. type K probe diameter max 2mm (see picture 3, page 8).

Depending on the frothing system, the applicable specification need to be selected to determine if the appliance is within specification.

Available systems:

- Manual system pannarello (CMF)
 - Temperature specification: $\Delta \geq 45^{\circ}\text{C}$
 - Froth height specification: $\geq 15\text{mm}$ on 100gr. of brewed milk product
- Automatic system (Latte Go)
 - Temperature specification: $\Delta \geq 60^{\circ}\text{C}$
 - Froth height specification: $\geq 15\text{mm}$ on 100gr. of brewed milk product

Milk temperature in the beaker:

- System with CMF: With milk at Trefr. (about 4-10 °C): $\Delta \geq 45$
- System with LatteGo: With milk at Trefr. (about 4-8 °C): $\Delta \geq 60$

How does it work:

1. The milk is heated in the first chamber of the carafe thanks to the steam.
2. Then, it is mixed with air and frothed in the middle chamber.
3. Finally, in the outlet chamber, the 'typhoon effect' perfects the milk texture by removing the large bubbles

Procedure to measure the temperature of the milk.

1. Place the beaker under the milk spout.
2. Dispense 100gr of milk froth.
3. Measure the temperature immediately after milk froth is dispensed, you need to finish the measurement within 5 seconds.
4. The temperature is measured by placing the probe of the thermometer $\pm 10\text{mm}$ above the bottom of the beaker.
5. Then stir the probe for 3 to 5 times and read out the thermometer values during stirring, values should stabilize.
6. Hold the probe still in the center of the beaker and read out the temperature.

Technical information

Procedure to measure the milk froth height.

Manual system (CMF)

Pour 100cc. of milk at Trefr. in a beaker of 250 ml of capacity and with a inner diameter of 70 mm; with machine in steam mode:

1. Place the beaker with the frother dipped in milk, dispensing steam and start the chronometer.
2. After about 30 to 60 seconds, stop the steam and check the result on milk.
3. Do not use it with an intermediate position.

Automatic system (Latte Go)

After setting the machine to delivery of 120gr. of product:

1. Launch the “hot milk” function.
2. Collect the product in a beaker with a 250ml of capacity and with an inner diameter of 70 mm, and verify the result obtained on milk. Carry out the test using milk at a Trefr..

In case the machine allows modify of the emulsion through the menu, use the machine with the emulsion set to the default value.

Related to the above testing procedure derives the following table of acceptability:

Grams of product	Minimun height of the milk cream
≥ 130	≥ 30mm
120	≥25mm
110	≥ 22mm
100	≥ 20mm
90	≥ 16mm
80	≥ 13mm
70	≥ 11mm

To verify the height of the cream, a practical example is to add to dispensed product a small amount of coffee. The addition of coffee immediately highlights the surface of separation between liquid and cream.

Technical information

Operating logic

Switching on

When the machine is switched on, the gear motor repositions itself as follows:

- It acts on microswitch 1
- The gear motor changes its rotation direction and moves upwards again by approx. 1-2 mm.
- The boiler begins to heat the water for approx. 45 sec, in order to reach the optimal temperature (established by the software).

The gear motor is powered by a direct current motor that engages with the smaller double toothed wheel using a worm screw. The unit is mounted on the axle of the large gear wheel and when a coffee is requested, it moves from the standby position to the dispensing position, and then back to the standby position again. The microswitch indicates to the gear motor when the brew group is in the work position or home position.

- Standby position: 1
- Dispensing position: 2

Temperature sensor (adjustment)

Temp. (°C)	R nom (kΩ)	ΔR (+/- %)
20	61.465	4.0
50	17.617	3.1
75	7.214	2.4
80	6.121	2.3
85	5.213	2.2
90	4.459	2.1
100	3.3	1.8
125	1.653	2.4
150	0.893	2.8

An NTC is used as a temperature sensor; in the event of overheating this reduces boiler element power consumption. The electronic system detects the current boiler temperature from the drop in voltage of the sensor and adjusts it accordingly. Heating element values and corresponding temperatures: see table.

Technical information

Coffee grinder

The coffee grinder is driven by a direct current motor (1) using a worm screw helicoidal wheel transmission (2). The worm screw (2) drives a plastic gear wheel (3), which turns the lower grinder (4) and the increment pin (5)

Coffee grinder blocked

When the coffee grinder is working, the software monitors the current consumption. If the current value is very high, the machine concludes that the coffee grinder is blocked; instead, if the current value is in the middle, the machine concludes that all is ok and it goes on to do the product.

Because the current consumption of grinder changes depending on the situations (motor new or old, cold or hot, coffee blends, etc.), these current targets are not static, but dynamic.

Technical information

Milk container

- 1) Steam inlet
- 2) Complete LatteGo milk container assy

Steam flows into the LatteGo

Air, steam and milk are mixed at high speed resulting in a dense silky smooth milk foam

The two LatteGo parts clicked together create a channel in which steam pressure sucks up milk through the hole at the bottom of the container

Only LatteGo 2.0 is compatible (421945016211- 421945016221).
Do not use the first LatteGo carafe version (421944083391- 421944083621).

“Water low” message (water reserve)

Function:

The water level is monitored by a capacitive sensor, located one third of the way up the water tank wall.

If the electronics assembly detects, by means of the sensor, that the amount of water in the tank has dropped below the above mentioned level, a water reserve remains available for the dispensing process underway (this will cover 200 flow meter pulses).

The product dispensing process will then come to an end.

If a dispensing cycle ends after the sensor has been triggered (in the reserve) then the display “Water low” continues to be displayed during the following dispensing cycle.

Technical information

AquaClean water filter

The AquaClean filter is designed to reduce limescale deposits in the coffee machine and provide filtered water to preserve the aroma and flavor of each cup of coffee. By using a series of 8 AquaClean filters, there is no need to descale the machine for 5000 cups (It depends both on the type of coffee used, rinsing and cleaning programs).

We recommend installing the water filter AquaClean the first use of the machine to the maximum before using 5 L of water. The machine display will indicate when the filter needs to be replaced. The maximum limit is equivalent to 110 L of water.

The conditions related to the filter work environment (water, therefore, an active environment for bacteria and microorganisms), require the replacement with a minimum frequency (we suggest 3 months from the activation to ensure the best performance). The filter starts working from the time it is filled with water and continues working even with the machine off. It cannot be deactivated manually, as it must end its life cycle.

At the filter activation the display shows the icon with the percentage of use:

- Initially 100% then decreasing.
When the autonomy of the current filter becomes less than 8 L of water the display shows:
- The icon flashing slowly. It means 10%.
When the autonomy of the current filter becomes less than 2 L of water the display shows
- The icon flashing quickly. It means 0%.
After a maximum of 110 L of water supplied the flashing light turns off and the machine needs to be descaled.

Descaling request

Descaling frequency in AQUACLEAN					
The first activation must make before you've paid up to 5000ml products because mind thinks as if he had the filter					
Hardness	Filter number	Percentual on display 10% the icon flashes slowly. (encourage the consumer to buy the filter)	Percentual on display 0% the icon flashes quickly. (tell the consumer to change the filter)	MAX Quantity water, the icon turns off. (replace filter)	
Indifferent	From 1/8 to 7/8	8050ml	2000ml	110000ml	Replace filter (you can not turn off)
	8/8				Descaling

If after descaling or after the use of a filter this is not reactivated, the machine recognizes the water hardness setting and calculates as in the table below

Descaling cycle frequency			
Hardness	WATER HARDNESS	Without water filter	Not reactivating the filter
1	Soft (up to 7°dH)	240 litres (480,000 pulses)	210 litres (420,000 pulses)
2	Medium (7° - 14°dH)	120 litres (240,000 pulses)	105 litres (210,000 pulses)
3	Hard (15° - 21°dH)	60 litres (120,000 pulses)	52.5 litres (105,000 pulses)
4	Very hard (over 21°dH)	30 litres (60,000 pulses)	26.25 litres (52,500 pulses)
The default water hardness level is 4. Each litre of water corresponds to approximately 2,000 pulses.

Brew Unit maintenance - where to grease and positions

Brew Unit

Home Position

Work Position

Disassembly - and Reassembly advice

Before you start dismantling!

For your safety be sure the plug is disconnected from the mains!

The product is designed for easy access to the internal components. Make sure that all accessories have been removed.

Removal of the housing:

1. Make sure the power cable is unplugged.
2. Take out the four screws and pull up the upper cover.

Disassembly - and Reassembly advice

3. When assembly the finger-protection screw:

- Up to SN TW901907111749 use torque force 1.2Nm +/- 0.1
- From SN TW901907111750 use torque force 0.8Nm +/- 0.1

4. Take out the two screws in the back panel and remove it.

5. To remove the two lateral panels take out 3 screws for each of them

Disassembly - and Reassembly advice

Removal of the UI

1. To remove the UI push the 2 snaps inside (indicated with the red arrows):

2. Slowly remove the UI pulling first the upper part. While doing that take care of the LED guide (in the red cross).

3. Then unplug the cable.

Do not use a screwdriver, but pull it keeping the flat cable and not the connector (some force is required).

Disassembly - and Reassembly advice

4. Click on the 6 snaps to remove the UI board protection.

Removal of the Grinder

1. Pull out the grinder assy
2. Remove the electric connections

Removal of the Electrovalves

1. For the upper EV pull outwards the valve holder.
2. For the lateral EV take out the 2 screws, then remove the valve.

Disassembly - and Reassembly advice

Removal of the Gear motor

1. Take out the brew unit motor cover removing the 2 screws

Be aware there is an empty hole (in the red circle). Do not insert any screw inside

Removal of the Boiler

1. Remove all the electrical and water circuit connections
2. Take out the 2 screws from the boiler support.

Removal of the Flowmeter

1. Remove the electric connection
2. Press on the holder to pull out the flowmeter, then remove water connections.

Disassembly - and Reassembly advice

Removal of the Mainboard

1. Remove all the electric connections
2. Keep pressing on the left holder to be able to release the board.

The mainboard contains several fixed wires which cannot be disconnected from the board.

The UI cable is also fixed to the mainboard.

To completely remove the mainboard from the appliance, disconnect all fixed wires from their destination component.

Removal of the Pump

1. Pull the pump holder to the right
2. Remove all the connection

When reassembling the pump, ensure to use hot melt to fix the thermal fuse.

Disassembly - and Reassembly advice

Removal of the Coffee and Water spout

1. To remove the front panel start at the lower snap (1). Push to the left and on top of it, then the cover opens at the front side and you can put a finger (nail) in between. Then push on the upper snapnock (2).
2. Pull down the coffee spout, then remove the pipe.

3. Take out the 2 screws
4. Unsnap the click (as shown in picture) and pull the front case cover to remove it (some force is needed).

Disassembly - and Reassembly advice

5. Remove the two screws to release the water spout.

Removal of the Microswitch

1. To remove the microswitch please take extra care, slowly pulling it out from its place, then remove the connections.

Disassembly - and Reassembly advice

Removal of the IEC Connector

1. Remove the screw as shown in the picture, then you are free to unlock it and to remove the connection.

2. That 2 parts are glued. In case of replacement, order both parts and apply some hot glue as shown in green:

In case of Error 19, properly check the socket and cable connection.

Philips EP Series

Test mode

Introduction

Test mode is used to test the machine in its mechanics and electronic components

How it works

The machine enters in test mode by pressing in sequence K15 - K10 - K11 - K14 in the first two seconds after switching on the machine by mean of the main switch on the backside of the CA.

Series 4000 CMF

Test mode

Series 4300 LatteGo

Series 5400 LatteGo

Test mode

There are 3 different levels, in each level the coffee-machine can execute different commands,

- **Level 1:** In this level the operator can
 1. test all the Buttons and Leds activation and color:
 - a. Buttons : K1, K2, K3, K4, K5, K6, K7, K8, K10, K11, K12, K13, K14, K15, K16.
 - b. Leds :L1(W), L2(W), L3(W), L4(W), L5(W), L6(W), L7(W), L8(R), L8(G), L8(B), L10(W), L11(W), L12(W), L13(W), L14(W), L15(W), L16(W), L17(W), L18(W).
 2. Check the version of the UI SW.
 3. Check the version of the Main SW.
 4. Check the version of the UI Boot.
 5. Check the version of the Main Boot.
 6. Check the frequency of the net (50 Hz, 60 Hz).
 7. Check the voltage of the net (120 V, 230 V).
 8. Check the buzzer sound.
- **Level 2:** In this level the operator can:
 1. Test all the loads:
 - a. Move the Brew Unit upward and downward.
 - b. Open/Closed the EVs.
 - c. Start the Pump.
 - d. Start the Heater.
 - e. Start the Grinder.
 2. Test all the sensors:
 - a. Microswitch door activated/not activated.
 - b. Microswitch BU position (work/home) activated/not activated.
 - c. Hall sensor water level activated/not activated.
 - d. Flowmeter
 - e. NTC
 3. Execute special functions:
 - a. Steam-out (see dedicated documents).
 - b. execute the Reset to default (see dedicated document).
 - c. Reset of the Error log
 - d. Reset of the Grinder parameters.

The user can switch the level by pressing the Button K0.

Legend:

(O) = Orange

(B) = Blu

(R) = Red

(G) = Green

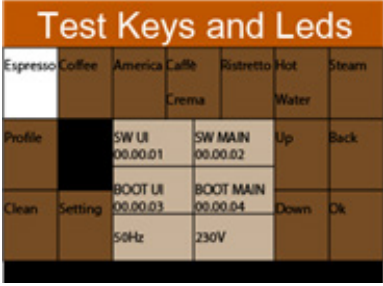

(W) = White

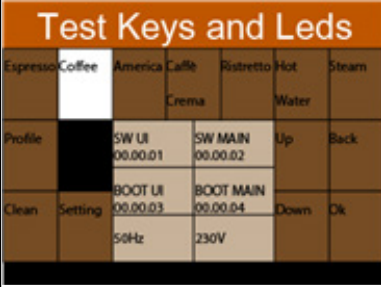

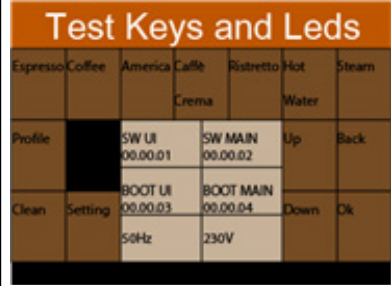

At the start up all loads are turned off. The software allow to have multiple loads active at the same time.

Functions/features explanation

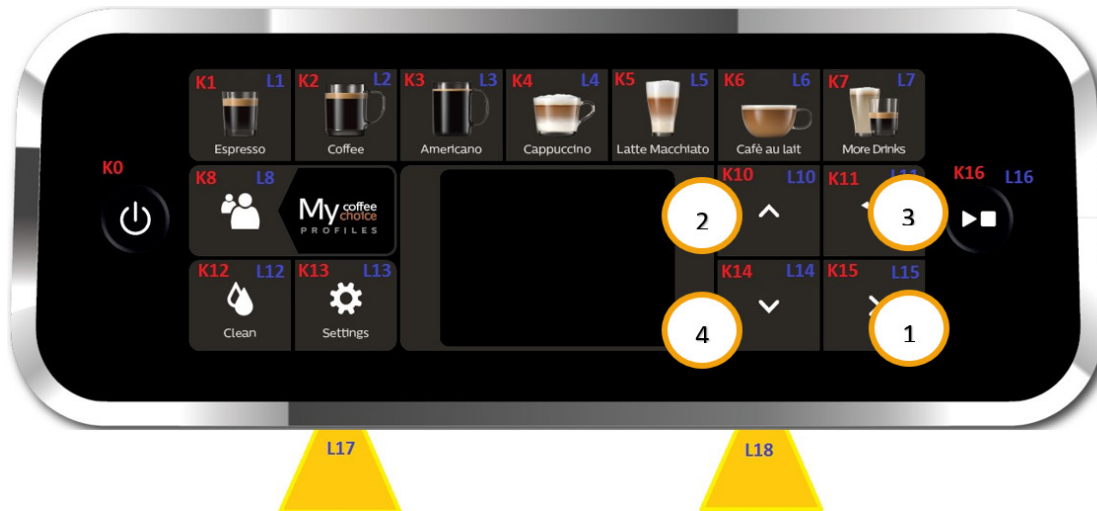

Steam out

The Steam Out feature is available in the Test Mode.

The machine enters in Test Mode by pressing in sequence K15, K10, K11, K14 in the first two seconds after switching on the machine by mean of the main switch on the backside of the CA.

There are 2 different levels, in each level the coffee-machine can execute different commands.

The Steam Out command is available in the Level 2.

The user can switch the level by pressing the Button K0.

Legend:

(O) = Orange

(B) = Blu

(R) = Red

(G) = Green

(W) = White

At the start up all loads are turned off. The software allow to have multiple loads active at the same time.

Functions/features explanation

The following conditions are mandatory for the Steam Out procedure:

1. The Ntc sensor must work correctly; if there is a failure on NTC (Ntc disconnected or in short circuit) the operation cannot be performed (turn off the machine and repair before do Steam-out operation).
2. The DREGDRAWER must be in place and the DOOR must be closed; if someone is not in place the operation cannot be performed. To start again the operation insert drag drawer and close service door.

When the Steam-Out is complete the following parameters are reset to their default values:

Parameters	Default Value	Description	Memory map
All recipes book	See req.	All recipes book restored to the default. See 20191002_OmniaRecipes08	N
Alarm_Refill	TRUE	Request priming circuit next power-on of the machine	N
Bu_Loaded	FALSE	Set Brew-unit clean and not fill with coffee	N
Initial_Rinsing	TRUE	At the start up the machine will perform the initial rinsing.	N
Temperature	Medium	The temperature in the setting will set to Medium	N
First use	TRUE	At the start up the machine will request the first installation	N
Brightness of the display	Medium	The Brightness of the display is set in to Medium	N
Unit	ml	The Unit is set to ml.	N
Profile Active	BLUE	The Profile active is set to BLUE	N
AquaClean reminder	5	The AquaClean reminder is restored.	N
Aroma Very Mild Time (ms)	5900	Grinding time for aroma 1 (ms)	Y
Aroma Mild/Medium Time (ms)	6500	Grinding time for aroma 2 (ms)	Y
Aroma Strong/ExtraStrong Time (ms)	7150	Grinding time for aroma 3 (ms)	Y
BU Unload Current Array [i]	150	Array of last 4 brew unit effort during rinsing cycle (in milliamperes). → Autozero for new autodose system. (i = 1..4)	Y
Max Grinder Time (ms)	10000	Maximum time for the grinder	Y
Grinder Num Skip Adjust Dose	2		Y
Array BU Pointer	0	Pointer in the BU Unloaded current	Y
Coffee Grounds	12	Number of grounds in dregs drawer	Y
AquaClean Filter Autonomy (ml)	0	Autonomy of last Aqua clean filter activated	Y
AquaClean Filter Startup (ml)	10000	Counter of water for enable first Aqua Clean filter; if expire, the machine need a descaling action to activate a new filter.	Y
AquaClean Actual Filter	0	Number of Aqua clean filter active in aquaclean chain	Y

Functions/features explanation

Parameters	Default Value	Description	Memory map
ErrorLog [i]	0	Array Error saved in machine reset (i=1..10)	Y
Acoustic Tone	Yes	Buzzer activation	Y
Language	ENGLISH	Languages selection	Y
Standby Time (minutes)	30	Auto switch off after x minutes	Y
Theater light	ON during brewing	Theater light	Y
Beverage counters	0*	All beverage counters	Y
*Only in case the total number of beverages is below 20. In the other cases the counters will remain untouched.			

Coffee specifications

Drinks	Min. qty (ml)	Default qty (ml)	Max. qty (ml)
Espresso	30	40	90
Ristretto	20	30	60
Coffee	100	120	220
Caffe Crema	115	140	220
Espresso Lungo	60	80	180
Americano	40	40	40
Cappuccino (Coffee + milk)	20 (100)	40 (120)	80 (210)
Caffe latte (Coffee + milk)	30 (80)	60 (140)	90 (340)
Cafe au lait (Coffee + milk)	50 (50)	90 (90)	150 (150)
Late macchiato (Coffee + milk)	20 (80)	40 (200)	80 (340)
Flat White	30 (40)	40 (80)	70 (180)
Frothed milk	40	180	320
Travel Mug	0	240	360
Hot Water	100	150	300

Functions/features explanation

Descaling

Please use Philips descaler only. Under no circumstances should you use a descaler based on sulfuric acid, hydrochloric acid, sulfamic or acetic acid (vinegar) as this may damage the water circuit in your machine and not dissolve the limescale properly. Not using the Philips descaler will void your warranty. Failure to descale the appliance will also void your warranty.

When the machine needs descaling, a message appears on the display.

1. Touch the clean icon on the user interface and select 'Descaling' in the menu.
2. Follow the instructions on the screen.
3. If attached, remove LatteGo or the milk frother.
4. Remove the drip tray and the coffee grounds container, empty them and put them back into place.
5. Remove the water tank and empty it. Then remove the AquaClean water filter.
6. Pour the whole bottle of Philips descaler in the water tank and then fill it with water up to the Calc / Clean indication (Fig. 48). Then place it back into the machine.
7. Place a large container (1.5 l) under the coffee dispensing spout and the water spout.
8. Press the start/stop button to start the descaling procedure. The descaling procedure lasts approximately 30 minutes and consists of a descaling cycle and a rinsing cycle..
9. Wait until the machine stops dispensing water. Refill the water tank when the message appears on the display. The descaling procedure is finished when the machine stops dispensing water.
10. Install and activate a new AquaClean water filter in the water tank.
11. When the descaling procedure is finished, the AquaClean light flashes for a while to remind you to install a new AquaClean water filter.

Using the AquaClean filter reduces the need for descaling!

What to do if the descaling procedure is interrupted

You can exit the descaling procedure by pressing the on/off button on the control panel. If the descaling procedure is interrupted before it is completely finished, do the following:

1. Empty and rinse the water tank thoroughly.
2. Fill the water tank with fresh water up to the Calc / Clean level indication and switch the machine back on. The machine will heat up and perform an automatic rinsing cycle.
3. Before brewing any drinks, perform a manual rinsing cycle. To perform a manual rinsing cycle, first dispense half a water tank of hot water by repeatedly selecting the hot water function and then brew 2 cups of pre-ground coffee without adding ground coffee.

If the descaling procedure was not completed, the machine will require another descaling procedure as soon as possible.

Functions/features explanation

Temporary solutions

Cable tie for the pump

To make sure the pump won't move from its place. The pump will be assembled with a cable tie. In case a swap is needed, please follow these step to place it back:

1. Start inserting a cable tie (20cm x 1,2mm) in the empty space of the pump holder, then keeping both pull them inside:

2. In pictures 1 and 2 you can see the exactly position where to place the cable tie.
3. Don't close it too much: the leftover cable needs to be 5cm to guarantee the proper tightness (picture 3)

Philips EP Series

Functions/features explanation

Temporary solutions

Tape for service door

Before the shipment of the appliances, is required to apply 4 pcs of adhesive tape as shown in picture.

1. Do not cover the water sensor area (in red)
2. Do not leave any gap between the tape and the corner (green arrows)

Functions/features explanation

Espresso Philips Service Center (EPSC)

EPSC is the Service tool to upload the software on the machine and run the diagnostic mode.

It can be downloaded from the following link: <https://www.epsc.philips.com/ServiceCenterPortal/>

The application can be used only in combination with the Saeco Programming Device:

Cod. **996530009845** “**KIT PROGRAMMER SERKIT SSC2**”.

A new cable **421946047151** “**WIRING SERPROG OMN PROGRAMMER ASSY.**” is required.

They can be ordered as spare parts.

All details related to the registration and operation are explained in the enclosed Quick start guide (QSG).

Espresso Philips Service Center– Quick Start Guide

Press the icon to view the document

To open the attached document is necessary to save the service manual on your PC.

The main Diagnostic Parameters description is available on the GDA_114331.

In order to connect the machine to the PC, we need to remove the back panel, which will expose the complete mainboard

REMEMBER: The board is working at 230V

Please take extra care before you start to open the machine or connect/disconnect the programmer cable, as till the USB programmer, high voltage is going through

Functions/features explanation

Repair Flow

Process step	Saeco No.	Action
Inkate	1	Visual inspection (transport damage) take care for pictures
	2	Check Type/Serial number
	3	Log all available accessory, counte check with info from consumer
Diagnosis	4	Check product for consumer complaint and main function (NFF contact consumer)
	5	Run Diagnostic to get error codes and relevant set statistics (EPSC) refer SDA_114585
	6	Opening machine
Repair	7	Repair the fault(s) encountered (view Symptom Cure)
	8	Checking any modifications (view Symptom Cure, new software, etc.) Refer Annex tabs per family (if available)
	9	Basic Functional test while the application is open (linked to consumer complaint or what you may have detected)
Coffee		<i>Make e 2 cups at the same time. Are the volumes equal</i>
- Crema		<i>Blow on the coffee. Does the crema come back together</i>
		<i>Is the crema colour correct (Hazelnut)</i>
- Temperature		<i>Is the coffee temperature within spec refer SDA_97832</i>
Steam		<i>Does the steam work</i>
How Water		<i>Does the hot water work</i>
Milk		<i>(if applicable)</i>
- Cappuccino		<i>Does the cappuccinatore produce good froth</i>
	10	check water circuit for any leakage, such as Oetiker clamps, boiler and valve connection and hoses
	11	Check mechanism for good movement and unexpected noise
	12	Assembly
Inspection	13	Do cabinet parts fit well together
- Visual	14	Check for damages
- Power Check	15	Will the set switch on
- Accessories	16	Do the accessories match with the intake
- Consumer complaint	17	Check the product for the consumer complaint
Quick Functional test	18	Make 2 cups at the same time. Are the volumes equal
Coffee	19	Is the sound normal ?
Leakage	20	Did the product leak during the testing
Steam out	21	Steam out before shipping out, if temperature is below 0° to prevent any damaged due to frozen water. No need for those families Minuto Family (all platform); Incanto Family New ; Pico Baristo ; Gran Baristo; Intelia V2 ; Philips 2000 – 2100 ; Incanto Executive; Xelsis-New; Moltio Family (all Platform) Please also check for GDA_113455
Reset Error code	22	New devices like Xelsis-New have the possibility to reset the error code, once captured it need to be reset to see if it appear afterwards again
Claim Administration	23	Provide precise IRIS code, according dedicated code table for Garment Care products. The location code from the part you have worked on MUST be completed always with the part reference from exploded view ! Primary fault and corresponding IRIS code should be claimed first.
Cleaning	25	Clean water reservoir, bean reservoir, brew chamber and conveyor
	26	Clean and dry brew unit, coffee bin and drip tray
	27	External cleaning (housing surface)

Functions/features explanation

Process step	Saeco No.	Action
Safety check	28	Earth leakage, Isolation test, resistor of earth wire grounding, as requested in certain country's (VDE, ISO) or H-POT TEST
Visual	29	Check the mains cord for damages
Packing	30	Packing
	31	Check completeness (accessories) according income log refer #3
	32	Neatly pack the product
Documentation	33	Info for Consumer by packed ? e.g. service brochure, FAQ, NFF letter, s/c etc....
	34	Descaling instruction with changed procedure (S/C) if available
Repair report	35	Is there an answer to ALL consumer questions/complaints (see complaint)
	36	add set statistic and give, if needed clear instruction towards consumer
	37	Is it indicated which documents are added
	38	Are there tips how to prevent issues

Error Codes

CODE	Description	Notes
01	Grinder fail (grinder blocked)	
02	Grinder fail (grinder turns not detected)	
03	Bu movement toward WORK fail	
04	Bu movement toward HOME fail	
05	Water circuit fail	
10	NTC short circuit fail	
11	NTC open circuit fail	
14	Heater over-temperature fail	
15	Heater time-out fail	
19	Zero-Crossing fail	

The error codes stored by the machine can be accessed via the USCP CONFIG MODE.

The information related to the error codes are available in the ErrorLog made up of 10 records.

The error codes are stored according to a FIFO concept.

The last error will be always at the first position ErrorLog1. And the older ones will be shifted down every time a new error code is added in the first position.

Position	Time0	Time1	Time3	Time4	...	TimeN	TimeN+1
ErrorLog 1	0	A	G	R		C	Z
ErrorLog 2	0	0	A	G		B	C
ErrorLog 3	0	0	0	A		R	B
ErrorLog 4	0	0	0	0		G	R
ErrorLog 5	0	0	0	0		H	G
ErrorLog 6	0	0	0	0		I	H
ErrorLog 7	0	0	0	0		O	I
ErrorLog 8	0	0	0	0		R	O
ErrorLog 9	0	0	0	0		G	R
ErrorLog 10	0	0	0	0		A	G
